

CASE STUDY ON VOCATIONAL EDUCATION TELANGANA

Self-sufficiency is my goal

I want to join the Indian Navy. Along with it, I want to cultivate and grow crops in my fields. I want to take care of my family's food needs by growing our own food. I want my village and community to do the same.

My name is Darabojna Ajay Yadav and I study in Telangana State Model School, Lachapet Siddipet district. I study in class ten. My father is a farmer and by mother is a Beedi roller. I chose Agriculture as Vocational Education subject as I am fond of Agriculture and I have been accompanying my father to the fields. As I could easily connect it to my earlier knowledge and practice of working in the fields, I decided to study more about Agriculture.

During the last 2 years, I have studied about handling of advanced machines, crop rotation, soil testing and organic farming. As a part of the field visit we visited RR farms, agricultural institutions. We were informed during one of the classes, on how to use water during farming judiciously and on how to avoid wastage of water. I made notes of it and when I visited my family during summer vacations. I told my father about the various ways to avoid wastage of water. My father adopted many of the ways I suggested.

He was very happy when he was able to reduce the bore water bill. We also learnt a lot during the practicals which we did in the nearby fields. The experience of working in the fields and applying whatever I studied in class, helps me understand the concepts taught in class better.

Agriculture as a Vocational education subject, will inspire many students like me who come from rural agricultural background to pursue agriculture and make it a successful career.
