

CASE STUDY ON VOCATIONAL EDUCATION TELANGANA

Sirisha talks about her students and their enthusiasm in the IT/ITES trade

As a vocational education teacher of IT/ITES trade, I have been in TSMS Tekulapally for the past three years.

Looking at my students grow and learn, I feel very privileged to be a part of something they will always be able to carry forward and make a living for themselves.

I am proud of my students and they are very grateful and respectful to me. The students are always hungry to learn new things and they get excited when they get to use the internet in the labs. We are very fortunate to have a good computer lab and I find it extremely important for all students to learn the basics in computers, not just the ones taking this course. It lays the foundation for joining the IT/ITES Sector.

Other than technical communication skills, what I immensely focus is on the communication aspect for every students. I have seen great improvements in students when it comes to communication skills and the more they are involving in vocational education and learning new things, the more confident they are becoming.

My students love to present their work in class to other students and are proud of what they learn. They have been learning Microsoft Office Tools like Word, Excel and Powerpoint; creating database applications; online forms (like Google forms), reports, tables and also editing pictures on Adobe Photoshop. They surf the internet to study different topics in IT/ITES that are not available to us and also watch a lot of videos and tutorials. Some like to find difficult word meanings while some love to download pictures and infographics for their presentations. Other than that I discourage the use of social media and focus on talking more about their career options and prospects in their near future.
